

Drive shaft incorporated with universal joint is widely in use not only in automotive industry but also all other industrial scenes. Purpose: high torque transmission in limited space. WBW is specialized in universal joint, key element of module like drive shaft or propeller shaft. WBW is able to meet different requirements and shaft sizes of OEM customers. WBW also covers global aftermarket with wider range line-up and proudly extends our brand name. WBW maintains production and engineering knowledge and experience to produce universal joints of the highest quality viable at economical cost.

Universal joint consists of spider(cross) and 4 grease-filled roller bearings. It can transmit large torque at low friction. Spider with journal pegs and bearing cases as outer ring were hot forged or cold formed and machined. They are later carburized in furnace so that increased ruggedness and wear resistance are obtained. Parts are finally ground to designed size under severe tolerance. Oil seal as well as dust cover are also in use to protect internal journal area from intrusion of foreign material. Variety of grades and materials are selected to respond to extreme conditions such as very hot / very cold temperatures.

U-Joint With 2 Welder Plate Type And 2 Plain Round Bearings Manufacturers
